

Hearing Accessibility for Yoga

Redcat, FM system, and remote mics

Instructor with Redcat mic ("flexmic")

Participant with hearing aids, who brought their own personal remote mic

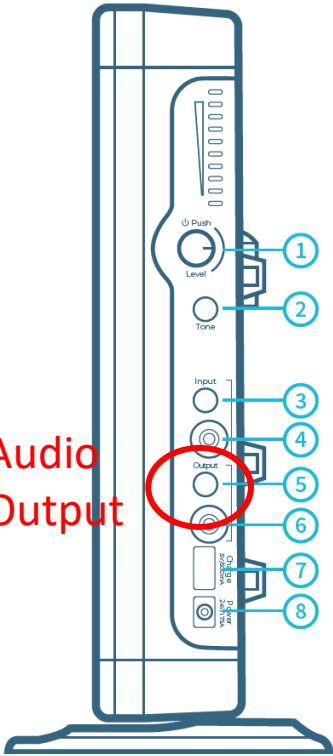

Participant with a) no hearing aids or b) hearing aids without telecoils

Participant with hearing aids that have telecoils

Redcat portable speaker

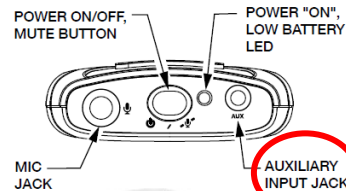

Audio Output

Male to 3 Male Y Splitter Audio Cable

Williams FM transmitter

Personal remote mic*

Personal remote mic*

On the Redcat, the "audio output volume selector" (not the speaker volume) should be comfortable but not overly loud. If there are complaints that the sound is distorted, then the volume OUTPUT of the Redcat might be too high. Individuals can adjust the volume on their own remote mic to set the volume they like.

*also called "Clip-on Hearing aid Bluetooth® accessory mic." It is a proprietary device, made by hearing aid manufacturers. They typically have a microphone with "audio in" 3.5 mm socket to connect to wired multi-media.
