Sound Advice

Information

What is a hearing loop?

A hearing loop is an assisted listening system consisting of a copper wire that encircles an area and a sound source. It transmits that sound wirelessly to a little receiver called a telecoil contained in most hearing aids and cochlear implants.

What is Sound Advice?

Free monthly workshops, designed to:

- provide opportunities to experience hearing loops,
- practice using your hearing device's telecoil program in a relaxed atmosphere;
- give time to discuss hearing loss challenges with others. *No products will be sold.*

When is it?

Every second Saturday of the month from 10:00 - 11:00 a.m.

Who organizes it?

The Shedd Institute's Loop Lane County Committee is a group of community volunteers whose mission is to spread awareness of the benefits and the greater use of hearing loops in public and private places.

How do I sign up?

Call The Shedd at 541-434-7000 to register or make a private appointment.
